Claims 1, 7, 13, 17-19, 24 and 30 are allowed.

The prior art discloses a network with plurality of cross link multiplexers, wherein the multiplexers have origin and destination ports for transceiving data signals accordingly. The multiplexers further have a plurality of interconnects to couple the adjacent cross link multiplexers.

The prior art however fails to disclose wherein a first interconnect is configured to convey a first bit of a number of bits of a data signal and a second interconnect is configured to convey a second bit of said number of bits of said data signal and said first bit remains substantially synchronized with said second bit.

Claim 32 is allowed.

The prior art discloses a network with plurality of cross link multiplexers, wherein the multiplexers have origin and destination ports for transceiving data signals accordingly. The cross link multiplexers further have format conversion capability from one format to another format.

Art Unit: 2616

The prior art however fails to disclose wherein the first format is one of a 10 Gigabit Media Independent Interface protocol, a 10 Gigabit Attachment Unit Interface protocol, and a Converged Data Link protocol, the second format is one of the 10 Gigabit Media Independent Interface protocol, the 10 Gigabit Attachment Unit Interface protocol, and the Converged Data Link protocol, and the second format is different from the first format.

Claims 37, 39, 41 and 43 are allowed.

The prior art discloses a network with plurality of cross link multiplexers, wherein the multiplexers have origin and destination ports for transceiving data signals accordingly.

The prior art however fails to disclose cross link multiplexers synchronizing wherein said synchronizing comprises the step of conveying each bit of a number of bits through a corresponding delay flip-flop.
